

3 ways to transform online safety for students with disabilities

Bark can help you empower students with disabilities to navigate the digital world more safely and confidently.

ONE

Safety planning

Students with disabilities face increased online risks, making safety measures crucial. The Bark Phone is designed for protection, going beyond standard parental controls. Best-in-class monitoring supports prevention, and alerts across 29 categories help parents plan for escalating threats to safety. Additionally, texts can't be deleted like with other smartphones, so you will have all the information you need to make a plan for the child's safety.

“

“The Bark Phone has helped us make the online world a little bit smaller ..We can [then] increase exposure slowly and gradually...so when they transition into independence they transition with healthy technology skills and boundaries.”

TWO

Skill development

By providing a safer device, you can allow the independence needed to support the development of daily living skills. Adaptive accessibility apps and a customizable interface helps support safe access to technology. Insights from alerts provide opportunities for conversations that fuel growth and learning.

“

“It helps us to talk about social interactions. It's a great tool to teach social skills.”

THREE

Empowerment

Inclusion fosters belonging, improving mental well-being. Bark devices provide confidence in building a child's ability to communicate with peers and engage in the community more safely. Location tracking is built in, providing information on physical location. Equally important to a student's safety is insight into their mental state, provided via alerts.

“

“It's helped my son feel more like a teenager. He struggled with social skills, but now he connects with friends and feels included.”
